

**EKYA
SCHOOLS**

WHAT WE LEARN DEPENDS ON HOW WE LEARN

At Eky learning isn't restricted to classrooms alone. We have reading programs, competitive intra and inter-school sports events, and regular trips to heritage sites, zoos, museums as well as educational institutes and corporate firms.

Children can join various clubs such as astronomy, visual arts, science, dance, debate, theatre, and even opt for after-school activities with expert coaches for kathak, western choir, robotics, karate, skating and more.

Keeping the holistic development of your child in mind, a dedicated team has created the Ekya curriculum, taking the best from effective global standards and successful educational frameworks.

MISSION

Our aim is to empower young minds to make a difference in the world.

VISION

We intend to build progressive K-12 schools that provide technology-rich and immersive learning experiences facilitated by passionate educators, to prepare our students for a rapidly evolving future.

THE ACADEMIC STRUCTURE

PRE-PRIMARY SCHOOL

The pre-primary program at Ekya, for 2 to 6 year olds, has two approaches - kindergarten and montessori. While montessori students learn through doing rather than instruction, the kindergarten students use play and a nurturing environment to enhance their natural skills and gifts. In the case of both approaches, Ekya believes in learning through curiosity by encouraging the young ones to boldly ask questions.

PRIMARY SCHOOL

The primary program at Ekya encourages students from grades 1 to 5 to pursue their intellectual interests through thought provoking classroom explorations. The english program works to make students proficient readers while the science programs create problem-solvers and change-makers out of them. Students also learn basic skills of programming and ICT tools, thereby forging new paths as they explore new learning areas.

MIDDLE SCHOOL

From grades 6 to 8, when our students step into adolescence, we begin to inculcate within them a spirit of independence and responsibility. With the science program students are encouraged to make cross disciplinary connections, while the social science program explores the socio-economic nuances of Indian and world history, civic participation and citizenship.

SENIOR SCHOOL

Mastery and excellence are the focus of Ekya's senior school program for grades 9 to 12. To excel in the outside world, this program attaches great importance to academic quality and intellectual expertise. Ekya's core values of empathy, Respect, grit, integrity and service are tied into the senior school program to create strong, just, kind and Future-ready leaders.

EKYA SCHOOLS

THE ALL-ROUNDERS OF EKYA

Can education be less about memorizing, and more about making a memory?
Can a lesson be touched, tasted, smelt and seen, instead of just read? Can we mould empowered human beings, instead of just skilled students? At Ekya, We Can.

Drawing on the legacy of the CMR Group of Institutions and national public schools and the innovative, immersive methods of school systems around the world, Our schools were instituted with one aim - to teach children not just what to learn, but how to learn. Here, knowing how to learn is a skill in itself, and the key to creating lifelong learners with the means to adopt and thrive in a consistently changing world.

So, Welcome to Ekya, the place where we live the lesson every single day.
